

Tiddalik Services improves environmental outcomes for Queensland through:

Sustainable Resource Management:

We adopt sustainable resource management practices that minimise the negative impact on the environment. This can include responsible waste management, water conservation, energy efficiency measures, and reduction of greenhouse gas emissions.

Conservation and Biodiversity Protection:

We support conservation efforts and biodiversity protection in Queensland by promoting practices that preserve and restore natural habitats, protect endangered species, and maintain ecological balance. This can include participating in habitat restoration programs, supporting wildlife conservation initiatives, and promoting sustainable land management practices.

Sustainable Procurement:

We adopt sustainable procurement practices by sourcing environmentally-friendly products and services, supporting local suppliers that prioritise sustainability, and promoting circular economy principles. This can help reduce the environmental footprint of our supply chain and support local businesses that align with sustainable practices.

Education and Awareness:

We raise awareness about environmental issues and promote sustainability among its employees, stakeholders, and the wider community. This can include providing education and training on environmental best practices, promoting sustainable behaviours in the workplace, and seek to engage in community outreach programs to promote environmental awareness and education.

Primarily, it is Tiddalik's goal to actively engage with stakeholders, including local communities, Indigenous groups, and environmental experts, to ensure that their efforts are aligned with local needs and priorities, and contribute positively to the environmental outcomes in Queensland.
